

PROVEN Technology PROVEN Products PROVEN Company

CyberMedix announces The WAVE (Wireless Alarm Verification Equipment) which offers proven technology, combined with the latest state-of-the-art designed software to provide the most robust redundant verification system available anywhere.

Response time and redundant notification are critical when alarms occur. The WAVE provides for both, with immediate automated voice broadcast over existing FCC licensed radio frequencies as well as computer screen notification. The WAVE also allows instant text messages to be sent to unlimited numbers of cell phones, pagers, or via email.

Now receive any wireless alarm including panic buttons, motion detectors, door contact, infant security systems, egress systems, data management systems, asset tracking systems and many others via:

- ?Your existing hand radios
- ?Cell phone text messages – normal dial or text messaging
- ?Your PC – full reporting capabilities included

The WAVE allows you the ability to be in several places at the same time without losing valuable contact with your facility.

CyberMedix Medical Systems, Inc.
1131 Airport Road, Graford TX 76449
Ofc: 603-250-5510 Internet: www.cybermedx.com

Technical Specifications for Lynx Networking

- One 10/100Base-T Ethernet connection required
- DHCP supported or fixed IP address
- Option 56K Dial up modem capability
- TCP sockets and serial tunneling
- Solid-state design for high reliability
- Security mechanism prevents unauthorized access
- Compact footprint
- Text messaging: 120 character limit per phone, pager or email.
- Number of pager alerts per alarm input- **unlimited**
- Number of email alerts per alarm input- **unlimited**
- Number of text messages per alarm input- **unlimited**
- Broadcasts: Six alarms (power on, battery low, etc) available.

Your Cell Phone is always there, always on, always connected - so you can get a text message on your display without making a sound. You have the message IMMEDIATELY! No callbacks, logins or extra gadgets.

It's easy, fast, and silent - for those times you want to be DISCRETE.

E-Mail accessible through the internet, too. Just click the email selection and the system will send all alerts automatically.

Database tracking is there to view the alarm history at any time, to change messages, and load it into Excel for reporting and analysis.

Pagers can be put to a real use by adding it to the list of numbers to call.
